FACT: Myopia (blurry distance vision) can increase your child's risks for serious eye diseases.

FACT: It's not too late to do something about it.

We can help.

Treehouse Eyes
MYOPIA CARE FOR KIDS

Book Your Child's Free Consultation Today.

1

Talk with your Treehouse Eyes Provider, or visit TreehouseEyes.com to schedule a free virtual consult with one of Myopia Coordinators.

2

Your Treehouse Eyes doctor will review your child's myopia history and risk factors, and take additional measurements not usually done by other eye doctors, to determine the best myopia treatment plan for your child.

3

Treatment can start immediately, with flexible monthly payment plans of about \$150/month. Your Treehouse Eyes doctor will customize a plan for your child and family, to get the best possible results.

Our Patients See Real Results

78% of patients Children using our Treehouse Vision System® treatment plan experienced a decrease in the progression of their myopia vs. no treatment.

"My daughter is myopic and she was progressing very quickly, we were having to get new glasses every few months. Our optometrist referred us to Treehouse Eyes for a consultation. We just finished our annual progress check where we discovered her vision had only changed by less than half of a percent since starting treatment."

-Ali, mother of Zoe, age 10

Eye Disease Risks Associated with Myopia vs. No Myopia

EYE DISEASE	-2.00D	-4.00D	-6.00D
Myopic Maculopathy ¹	2.2x	9.7x	40.6x
Retinal Detachment ²	3.1x	9.0x	21.5x
Glaucoma ¹	2.3x	3.3x	3.3x

Myopia in Children: What You Need to Know.

- Myopia is a progressive eye disorder that often begins to develop between the ages of 7 and 13, when children are experiencing a fast rate of growth. It can be caused when the eyeball grows too quickly or continues to grow after ages 10-12, when eye growth should normally stop.
- When left untreated, Myopia can lead to struggles in school and activities for your child due to poor vision, as well as increased eye disease risks.
- Because myopia progression is faster at age 7, there is a greater overall effect in slowing it down by 50% with the myopia control treatment.
- Myopia control has both the short-term benefits of better vision between eye exams and long-term benefits of protecting eye health.
- Myopia control treatments options can include soft contact lenses, ortho-k contact lenses and atropine eye drops. and soon special types of spectacle lenses (glasses).
